

**COMMON POOL OF GENERIC ELECTIVES (GE) COURSES  
OFFERED BY DEPARTMENT OF STATISTICS  
CATEGORY-VI**

**GENERIC ELECTIVES - : SAMPLING DISTRIBUTIONS**

**CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE**

<b>Course title &amp; Code</b>	<b>Credits</b>	<b>Credit distribution of the course</b>			<b>Eligibility criteria</b>	<b>Pre-requisite of the course (if any)</b>
		<b>Lecture</b>	<b>Tutorial</b>	<b>Practical/ Practice</b>		
<b>Sampling Distributions</b>	4	3	0	1	<b>Passed Class XII with Mathematics</b>	Introductory Probability

**Learning Objectives:**

The learning objectives include:

- To understand the concept of sampling distributions and their applications in statistical inference.
- To understand the process of hypothesis testing.
- To have a clear understanding of when to apply various tests of hypothesis about population parameters using sample statistics and draw appropriate conclusions from the analysis.

**Learning Outcomes:**

After successful completion of this course, students should be able to:

- Understand the basic concepts of hypothesis testing, including framing of the null and alternative hypotheses.
- Apply hypothesis testing based on a single sample and two samples using both classical and p-value approaches.
- Understand the Chi-square distribution.
- Analyze categorical data by using Chi-square techniques.
- Apply t and F distributions

**SYLLABUS OF GE-3A**

**Theory**

**Unit I**

**(15 hours)**

**Large sample tests**

Large sample tests: Definitions of random sample, parameter and statistic, sampling distribution of a statistic, sampling distribution of sample mean, standard errors of sample mean, and sample proportion. Null and alternative hypotheses, level of significance, Type I

and Type II errors, their probabilities and critical region. Large sample tests, use of CLT for testing single proportion, difference of two proportions, single mean, difference of two means, standard deviation and difference of standard deviations by classical and p-value approaches.

**Unit II** **(15 hours)**

**Chi square distribution**

Chi square distribution: Definition and derivation of  $\chi^2$  distribution with n degrees of freedom (d.f.) using m.g.f., nature of probability curve for different degrees of freedom, mean, variance, m.g.f., cumulant generating function, mode, additive property and limiting form of  $\chi^2$  distribution. Tests of significance and confidence intervals based on  $\chi^2$  distribution.

**Unit III** **(15 hours)**

**Exact Sampling Distributions**

t and F distributions: Student's t and Fishers t-distributions, Derivation of its p.d.f., nature of probability curve with different degrees of freedom, mean, variance, moments and limiting form of t distribution. Snedecore's F-distribution: Derivation of F distribution, nature of probability curve with different degrees of freedom, mean, variance and mode. Distribution of  $1/F(n_1, n_2)$ . Relationship between t, F and  $\chi^2$  distributions. Test of significance and confidence intervals based on t and F distributions.

**PRACTICAL/LAB WORK - 30 hours**

**List of Practicals**

1. Large Sample Tests:

- (i) Testing of significance and confidence intervals for single proportion and difference of two proportions.
- (ii) Testing of significance and confidence intervals for single mean and difference of two means.
- (iii) Testing of significance and confidence intervals for difference of two standard deviations.

2. Tests based on Chi-Square Distribution:

- (i) To test if the population variance has a specific value and its confidence intervals.
- (ii) To test the goodness of fit.
- (iii) To test the independence of attributes.

(iv) Test based on  $2 \times 2$  contingency table without and with Yates' corrections.

3. Tests based on t- Distribution and F- Distribution:

- (i) Testing of significance and confidence intervals for single mean and difference of two means and paired t – test.
- (ii) Testing of significance and confidence intervals of an observed sample correlation coefficient.
- (iii) Testing and confidence intervals of equality of two population variances.

**Practical work to be conducted using electronic spreadsheet / EXCEL/ Statistical Software Package/ SPSS/ calculators.**
